1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a method for collecting a fluid sampling having a select concentration of particles, classified in class 73, subclass 863.23.
- II. Claim 16, drawn to apparatus for reproducibly collecting, a sample having a select concentration, classified in class 73, subclass 863.21.
- III. Claims 17-24, drawn to a method for determining the concentration of a fluid sample, classified in class 73, subclass 61.73.

3. The inventions are distinct, each from the other because:

Inventions Groups 1 and 3 considered together and Group 2 are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as

claimed in groups 1 and 3 can be practiced by another and materially different apparatus than that of group 2 such as one not requiring an

actuator to remove the filter but a system where the filter is instead removed by hand.

Group 3 does not even require a filter as in group 2.

4. Inventions Group 3 and Group 1 are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require the particle collection element to be a filter as in group 1. The subcombination has separate utility such as formation of a reference sample or calibration purposes and not just for general measurement of concentration as in group 3, etc.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group 1 is not required for Groups 2-3, etc., restriction for examination purposes as indicated is proper.

Art Unit: 2856

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
